**Inventory Management in
Supply Networks**

Problems, models, solutions

Contents

Chapter A	Production Planning and Inventory Management	1
Chapter B	General Issues in the Analysis of Supply Networks	7
B.1	Elements of a Supply Network	8
B.2	Sources of Uncertainty in a Supply Network	11
B.3	Modeling of Supply Networks	15
B.3.1	Basic definitions	15
B.3.2	Modeling of the Time Axis	19
B.3.3	Inventory-Related Performance Indicators	23
B.3.3.1	Performance Measures Related to a Single Product	24
B.3.3.1.1	α Service Level	26
B.3.3.1.2	β Service Level	26
B.3.3.1.3	γ Service Level	27
B.3.3.1.4	Duration of a Stock-out Situation	27
B.3.3.1.5	Order Reliability Window	30
B.3.3.1.6	Customer Order Waiting Time	32
B.3.3.2	Performance Measures Related to a Group of Products	36
B.3.3.3	Customer-Class Specific Performance Criteria	41
B.3.3.4	The Effect of Inventory Performance on Subsequent Logistical Processes	43
B.3.4	The Key Performance Indicator „Inventory Run-Out Time”	48
B.3.5	The Demand During the Risk Period	50

Chapter C	Single-Level Inventory Policies	61
C.1	Approximate Analysis of Selected Inventory Policies	63
C.1.1	(s, q) Policy	63
C.1.1.1	Continuous Review	64
C.1.1.2	Periodic Review	74
C.1.1.3	Simultaneous Optimization of Order Quantity and Reorder Point	83
C.1.2	(r, S) Policy	91
C.1.3	(s, S) Policy	98
C.1.4	Comparison of the Inventory Policies	109
C.2	Exact Analysis of Selected Inventory Policies	111
C.2.1	A Single Opportunity for Replenishment: The Newsvendor Problem	111
C.2.1.1	Model without Fixed Costs	112
C.2.1.2	Model with Fixed Costs: Single-Period (s, S) Policy	116
C.2.2	(s, q) Policy with Poisson Distributed Demand and Continuous Review	119
•	Note 1: Normal Approximation of the Lead Time Demand	127
•	Note 2: Periodic Review	128
C.2.3	Base-Stock Policy with Poisson Demand and Continuous Review .	130
C.2.4	Customer Order Waiting Time Distribution for a Base-Stock Policy in Discrete Time	133
C.3	Two Customer Classes	137
C.4	Multiple Order Size Classes	140
C.5	Modeling the Supplier as a Queueing System	141
C.5.1	Make-to-Order Production	142
C.5.2	Make-to-Stock Production	146
C.5.2.1	Production Node with Unlimited Capacity	147
C.5.2.2	Production Node with Limited Capacity	150
C.6	Spatial Pooling of Inventory: The Square Root Formula	153

Chapter D	Analysis of Multi-Level Supply Networks	155
D.1	Introduction	156
D.2	The Bullwhip Effect	157
D.3	Multi-Level Inventory Policies with Local Control	165
D.3.1	Models for Divergent Systems	165
D.3.1.1	Poisson Demand in Continuous Time, Identical Regional Warehouses	167
D.3.1.2	General Demand in Continuous Time, Non-Identical Regional Warehouses	175
D.3.1.3	General Demand in Discrete Time, Non-Identical Regional Warehouses	185
D.3.1.4	General Demand in Discrete Time, Non-Identical Regional Warehouses, Customer Classes	195
D.3.2	Models for Systems with General Structure	199
D.3.3	Concluding Remarks with Respect to Systems with Local Control	201
D.4	Multi-Level Inventory Policies with Central Control	203
D.4.1	The Concept of Echelon Stock	203
D.4.2	Models with Internal Waiting Times	211
D.4.3	Models without Internal Waiting Times	217
D.5	Vendor-Managed Inventory	223
Chapter E	Materials Requirements Planning under Uncertainty	227
E.1	Stochastic Dynamic Lotsizing Models	230
E.1.1	Stochastic Single-Item Lotsizing Models	230
E.1.1.1	Backorder Costs	231
E.1.1.2	Service Level Constraints	236
E.1.1.2.1	Cycle α_c Service Level	236
E.1.1.2.2	Period α_p Service Level	243
E.1.1.2.3	β Service Level	244
E.1.2	Stochastic Multi-Item Lotsizing Models	249
E.2	Buffers	250
E.2.1	Safety Stock	251

E.2.2	Safety Lead Time	256
E.2.3	Overestimation of Demand	257
E.2.4	Inventory Rationing	257
E.2.5	Product Substitution and Cannibalization	258
E.3	Freezing the Production Schedule	259
E.4	Rescheduling	260
E.5	Advance Order Information	263
	Bibliography	267
	Index	279
	List of Symbols	285
	Appendix	291
	Appendix 1: Normal Distribution	291
	Appendix 2: Gamma Distribution	295
	Appendix 3: Mixed Erlang Distribution	296
	Appendix 4: Derivation of an Integral	298
